

# INSTALLING BACH MUSIC COMPOSER

BMC was written in 2008-2009 in VB4 (Microsoft Visual Basic language), At this time, my computer was working with XP or Win 95, I do not remember exactly.

Nowaday it is not possible to run VB4 with a computer Win 7 or Win 10 and VB4 projects are not compatible at all with new versions of Visual Basic. So I cannot resume this software so as to make it better or to remove some bugs. If someone is able to do it, I can give him the source code.

To install BMC, unzip the file *BACH Music Composer v1.80.zip*

Place the folder you get anywhere in your computer.

Then double click on *BACH Music Composer.exe*

The latest version I released was 1,70. The version I propose today is 1,80 Beta (but the previous version number information is still displayed).

BMC works on my two computers Win 7 and Win 10.

If it does not work with your computer it is possible that a file (a runtime or a DLL) is not present in your computer. May be BMC works at home because my computers have Visual Basic 2008 and the Framework 4,5 instaled. If you have the problem and are really interested by my program, try to install these tools and notify me please about the result.
